

AI Audit Report

Student: nakhoa232@clc.fitus.edu.vn Scenario: D Execution dates: 2026-07-30 to 2026-07-31

AI-assisted work and evidence completeness

Date / time	Tool / skill	Prompt record	Output / result	Evidence status
2026-07-30; exact time unavailable	Codex	Scope Scenario D and exclude real-user testing	D1-D4 workflow and deliverable plan	Prompt preserved; exact output remains in Codex task
2026-07-30; exact time unavailable	Codex + ux-heuristics	Begin work possible on Windows	Heuristic review and initial findings	Prompt preserved; observations linked to evidence
2026-07-30; exact time unavailable	Codex + Browser + ImageGen	Continue supported testing	Neutral upload input; request #33 user-to-Admin-to-user flow	Test asset and live screenshots retained
2026-07-30; exact time unavailable	Codex + Browser	Complete currently supported checks	Upload boundaries, Cancel, authentication, role denial, Fail evidence	Measurements and screenshots retained
2026-07-30; exact time unavailable	Codex + PDF + skill-creator	Prepare deliverables	PDF reports, reusable skill, and validator	Files retained; exact output remains in Codex task
2026-07-31; exact time unavailable	Codex + ux-heuristics + Browser	Continue automatable Windows checks	Contrast, reflow, persistence, pagination, no-result/reset	Measurements retained; inconclusive checks stayed Pending
2026-07-31; exact time unavailable	Codex + ux-heuristics + Browser	Finish supported automation	Localization, alerts, callbacks, limits of keyboard/network/download automation	Measurements retained; unsupported results not inferred

Integrity controls

- No participant, SUS, or UEQ-S data was generated.
- No non-Windows compatibility result was inferred from Windows Chromium.
- No finding was submitted to Google Form and no submission timestamp was created.
- Generated test assets are labelled as inputs, not EMS screenshots.
- Every Pass requires an observed state; unexecuted cells remain Pending.
- Missing times, verbatim outputs, and group prompts are labelled unavailable rather than reconstructed.

Prompt and output record

Available user prompts are preserved in AI-Prompts.md. Exact times were not present in the retained workspace data. The complete verbatim AI output remains in the Codex task and must be exported separately if the course requires it. The prompts originally used by the group to generate and refine Checklist.md are not available in the workspace.

Limitations

AI cannot manufacture genuine multi-platform evidence, user-testing data, Google Form timestamps, missing prompt history, or absent conversation exports. Severity and final submission decisions remain subject to student review.
