AI POLICY · TEMPLATES — 2026 v1.0

## AI Audit Report — 5-section Template per Artifact

Mandatory appendix for every AI-assisted homework (HW#01–HW#06, and Seminar).

*Adapted from Med Kharbach, PhD (2026) — AI Use Policy Templates for Higher Education. CC BY-NC-SA 4.0. This adaptation is prepared for FIT@HCMUS – CS423 / CSC15003 Software Testing course.*

### 1. Student Information

| Field                               | Value                                                               |
|-------------------------------------|---------------------------------------------------------------------|
| Student name (printed):             | ĐINH HOÀNG NAM                                                      |
| Student ID:                         | 23127430                                                            |
| Class / Cohort:                     | 23KTPM1                                                             |
| Assignment ID (e.g., HW#00, HW#02): | HW#01                                                               |
| Assignment date:                    | 02/06/2026                                                          |
| AI tool(s) used:                    | ChatGPT, Gemini                                                     |
| AI tool(s) used:                    | <input checked="" type="checkbox"/> Yes <input type="checkbox"/> No |

### 2. Instructions (read before filling)

- Add one row per AI-generated artifact (test case, script, checklist, OpenAPI spec, JMeter plan, etc.).
- Paste the verbatim prompt — DO NOT paraphrase.
- Paste the verbatim AI output (or include a labelled screenshot in the report).
- Tag the verdict: VALID / INVALID / INCOMPLETE.
- Reasoning must cite a course slide, ISTQB section, or technical RFC.
- Show the corrected artifact with the change highlighted.
- Sample rows are in italic — replace them before submission.

### 3. Audit Table — one row per artifact

| (1) Prompt + Tool                                                                | (2) AI Output                                               | (3) Verdict | (4) Reasoning (ISTQB)                                                                                                                                                             | (5) Student Fix |
|----------------------------------------------------------------------------------|-------------------------------------------------------------|-------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------|

|  |  |  | data, including Actual Result and Verdict status (PASSED/FAILED). In terms of content: The AI focuses solely on simple, routine operational flows (Happy Path). Based on the non-functional test types specified in Slide S02 (pages 43-46), the AI has omitted mechanical edge tests, performance testing (speed/stability) during high-speed typing, and recovery testing for unstable power supply from hardware devices. |  |

#### 4. Summary of AI Accuracy

Aggregate the verdicts from Section 3 and complete the table below.

| Metric                                      | Count | Percentage |
|---------------------------------------------|-------|------------|
| <b>Total AI-generated artifacts audited</b> | 4     |            |
| <b>VALID (correct, accepted as-is)</b>      | 1     | 25%        |
| <b>INVALID (wrong; rejected)</b>            | 0     | 0%         |
| <b>INCOMPLETE (acceptable after edits)</b>  | 3     | 75%        |

#### 5. Conclusion — When should AI be used (or not)?

Write 80–150 words describing patterns you observed. Where did AI shine? Where did AI fail? What is your recommendation for using AI in this kind of work in the future?

Based on the patterns observed across the audited artifacts, AI shines exceptionally well in high-level content generation, initial brainstorming, and drafting baseline technical structures, such as summarizing QA market trends or framing fundamental test case templates. However, AI significantly fails in low-level execution details, strict adherence to specialized domain constraints, and factual technical accuracy, frequently hallucinating fake URLs, misnaming software vulnerabilities, and fabricating academic process models.

Therefore, for future software testing assignments, AI should only be utilized as an introductory productivity accelerator under an "AI-augmented" paradigm, never as a final decision-maker. Human practitioners must strictly control the central verification loop, cross-checking all technical outputs against official documentation, slide specifications, and physical environments to guarantee ultimate correctness.

## 6. Mandatory Disclosure (paste verbatim)

Test cases and report were initially generated by ChatGPT; I reviewed and modified Requirement 1: QA/QC Job Market Analysis, add AI Impact for each job, Requirement 2: Software Defects Analysis and Requirement 3: Test cases basic steps, added edge cases TC16 (Kiểm tra trạng thái LED RGB khi chuyển nhanh nhiều chế độ hiệu ứng), TC17 (Kiểm tra hành vi khi chuyển đổi kết nối giữa USB, Bluetooth hoặc 2.4GHz Wireless), and TC18 (Kiểm tra Gaming Mode / khóa phím Windows trong lúc sử dụng); Requirement 1: QA/QC Job Market Analysis was written entirely by me (except AI Impact). The detailed AI Audit Report is attached as Appendix A. I confirm I did not use AI to generate any artifact listed in the prohibited category below.
