

AI Audit Report

Student: Đinh Hoàng Nam (23127430)

Course: CS423 / CSC13003 — Software Testing

Assignment: HW03-AI — GUI & Usability Testing on EMS

Disclosure

I use AI tools for the following tasks,

- analysing the supplied requirements and workbook;
- scaffolding the English report and evidence templates;
- recovering and migrating workbook content into Markdown artefacts;
- creating deterministic repository-local Agent Skills and validators;
- controlling the existing authenticated in-app browser for the authorised Task 1B live EMS checklist execution;
- capturing genuine SUT failure evidence and recording the observed results;
- synchronising student-reviewed corrections, findings, references, and reports;
- recalculating and cross-reconciling student-supplied de-identified Task 2 session metrics and SUS responses;
- checking structural consistency with deterministic validators.

OpenAI Codex performed the authorised Task 1B browser run under the student's direction and recorded genuine observations. The student reviewed the checklist and corrected five C1 outcomes. Codex did not recruit participants, answer SUS on anyone's behalf, open or analyse participant recordings, fabricate pilot or probe evidence, execute Task 3 compatibility coverage, or submit Google Forms.

Interaction index

Each detailed record contains only the AI tool name, date/time, prompt, and AI output or a clearly labelled output reference.

ID	AI tool	Date/time	Prompt	AI output
AI-007	OpenAI Codex	2026-08-01T19:05:18+07:00	Detailed entry	Labelled artefact references retained
AI-008	OpenAI Codex	2026-08-01T19:58:58+07:00	Detailed entry	Labelled artefact references retained
AI-009	OpenAI Codex	2026-08-01T20:20:25+07:00	Detailed entry	Labelled artefact references retained
AI-010	OpenAI Codex	2026-08-03T22:41:45.6285829+07:00	Detailed entry	Labelled artefact references retained
